

## ENVIRONMENTAL POLICY

The management of the SANDO Group is aware that human development must be environmentally friendly, so that future generations will find an undegraded environment. Balancing business efficiency with environmental preservation is an essential goal of the Company's management, given that it is firmly committed to the demands of today's society.

The SANDO Group is deeply involved in protecting our environment for two reasons: because it feels closely connected to it due to its indigenous nature, and because it perceives that the activity it carries out (production) has a significant interaction with the environment.

Evidence of the SANDO Group's identification with the natural environment is the long-standing environmental activity line, which has carried out numerous forestry and gardening activities.

Under these premises, the Company's Environmental Policy is based on the following principles:

- Identification with the environmental protection policy adopted by the various social stakeholders in our areas of operation, collaborating with the relevant agencies.
- Commitment to the availability of the information and resources necessary to achieve our objectives.
- Compliance with the environmental laws and regulations applicable to our production processes, at the national, regional, and local levels.
- Commitment to continuous improvement of environmental performance, with annual setting of objectives and targets necessary to minimize the impact produced.
- Gradual incorporation of recycled and recyclable materials into our activities.
- Integration of suppliers and subcontractors into our environmental management objectives.
- Establishment of the necessary mechanisms to prevent pollution during the course of our activities.

The Company has designed an Environmental Management System in accordance with the reference standard: UNE EN ISO 14001:2015, and is committed to implementing, maintaining, and updating it periodically, transmitting and disseminating the commitment acquired at all levels and to all parties linked to the Organization, through communication and awareness-raising regarding environmental protection.
